Low Impact

XT-2000 Orange Oil Plus® is a least toxic, low impact product that provides effective treatment without the introduction of hybrid toxic chemicals into your home or business.

Great Option for Larger Structures

Need to treat a condominium complex, apartment building, restaurant, school, or hospital? These can be difficult and costly to treat with other methods – use XT-2000 Orange Oil Plus® instead!

Look for the "Certified XT-2000 Orange Oil Plus® Specialist" seal when choosing a pest control operator. Certified specialists are trained in the use of our product and home inspection techniques by XT-2000, Inc.

Studies and over 15 years of real world experience have shown that XT-2000 Orange Oil Plus® achieves results. Tens of thousands of homes have been treated with XT-2000 Orange Oil Plus® nationally!

The best way to deal with termites is to think of treatment as ongoing maintenance. That is why we recommend annual inspections after initial treatment, which many of our certified companies offer as part of their warranty when using our product. Discuss specific warranty details with the certified company in your area.

XT-2000®
- ORANGE OIL PLUS -

What makes XT-2000 Orange Oil Plus so amazing? In a word: purity.

Our product is 95% pure d-limonene.

Common Questions

What is XT-2000 Orange Oil Plus®?

XT-2000 Orange Oil Plus® is created by extracting the oil from citrus rinds (a renewable resource!) through steam distillation. This remarkable citrus oil is a proven and highly successful treatment for the eradication of drywood termites, carpenter ants, and wood boring beetles. XT-2000 Orange Oil Plus® not only treats the immediate injection site, but also saturates surrounding areas within the treated board, providing a superior treatment every time.

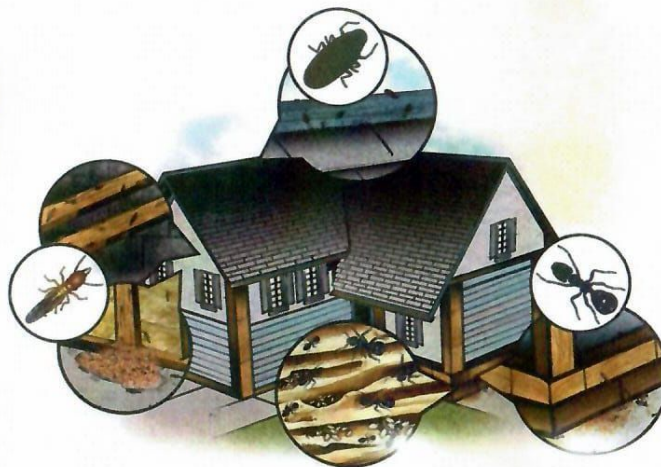

XT-2000 Orange Oil Plus® is 95% pure d-limonene, which is the active ingredient in our orange oil. The high level of purity is essential because it means XT-2000 Orange Oil Plus® will wick through wood, traveling through the porous cells of the wood in all directions – even defying gravity! Other orange oil products with lower purity levels have additives that change the chemical composition and prevent this capillary effect from occurring.

How do Termites enter my home?

To establish new colonies, winged reproductive will swarm to exposed wood on the exterior of nearby buildings and other structures. Drywood termites infest dry, undecayed wood, dead limbs of native trees, utility poles, structural lumber, etc.

How do we find them all?

Since termites eat from the outside of the house in, we identify damage and infestation on the outer areas of a home. If areas of infestation lead into inaccessible areas such as wall voids or enclosed areas, we will use a scope with a true optic or fiber optic camera on the end to look into those areas. The same evidence seen on the outside will be seen on the inside of inaccessible areas if infested.

STEP 1

Quality treatment starts with a quality inspection.

STEP 2

Branch 3 Licensed Field Representative will search wall voids & other inaccessible areas suspected of termite activity using high-tech optical scopes.

STEP 3

Once all areas of infestation have been found, treatment can begin. Certified technicians will inject XT-2000 Orange Oil Plus® directly into the infested wood using a drill and treat method.

STEP 4

XT-2000 Orange Oil Plus® will wick through the surrounding wood within a treated board leaving nowhere for target pests to hide. Both target pests & their eggs are killed on contact.
